

Utility and Pipe Protection Slabs

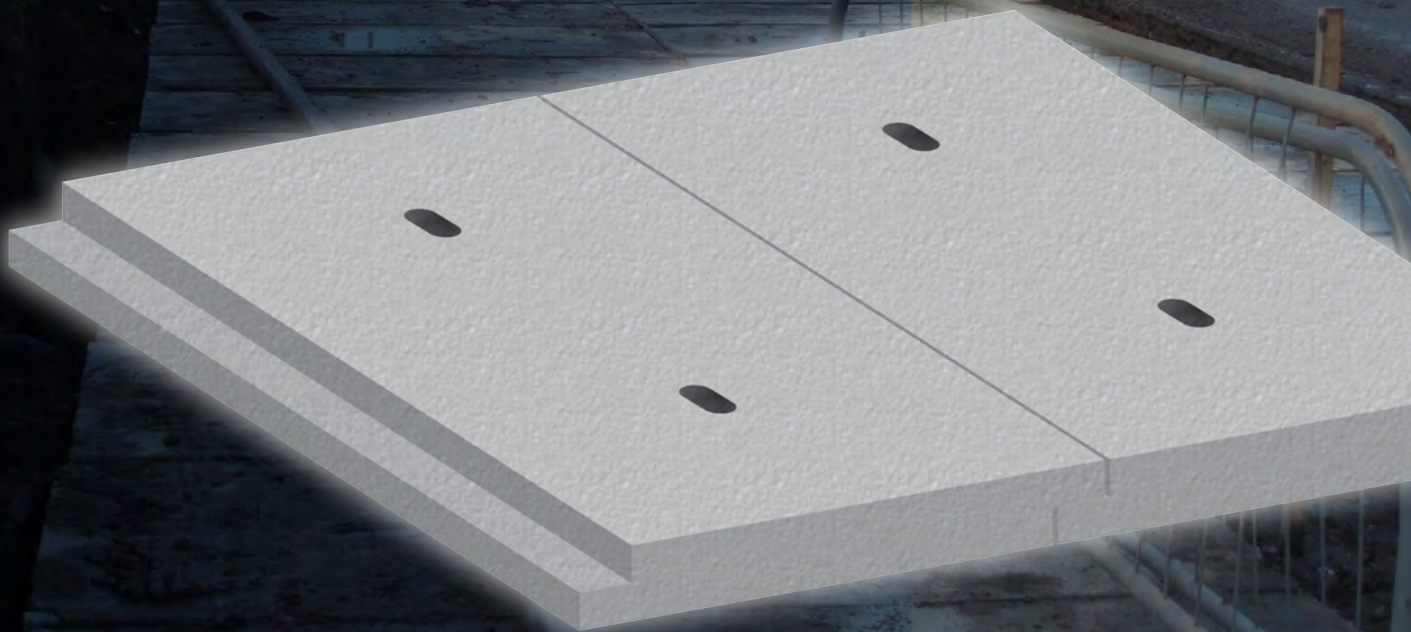

Our utility and pipe protection slabs are made from precast concrete and heavily reinforced with steel. They can be used to protect a range of vulnerable utilities such as water pipelines, high pressure gas mains and power cables from damage from above-ground traffic.

Three standard sizes are available that are all reinforced with heavy duty mesh to give you more choice.

Protects from mechanical excavations.

Both faces come reinforced with heavy-duty mesh.

Interlocking slabs allow for easy installation and ensure rigid construction.

Utility and Pipe Protection Slabs

Slab types

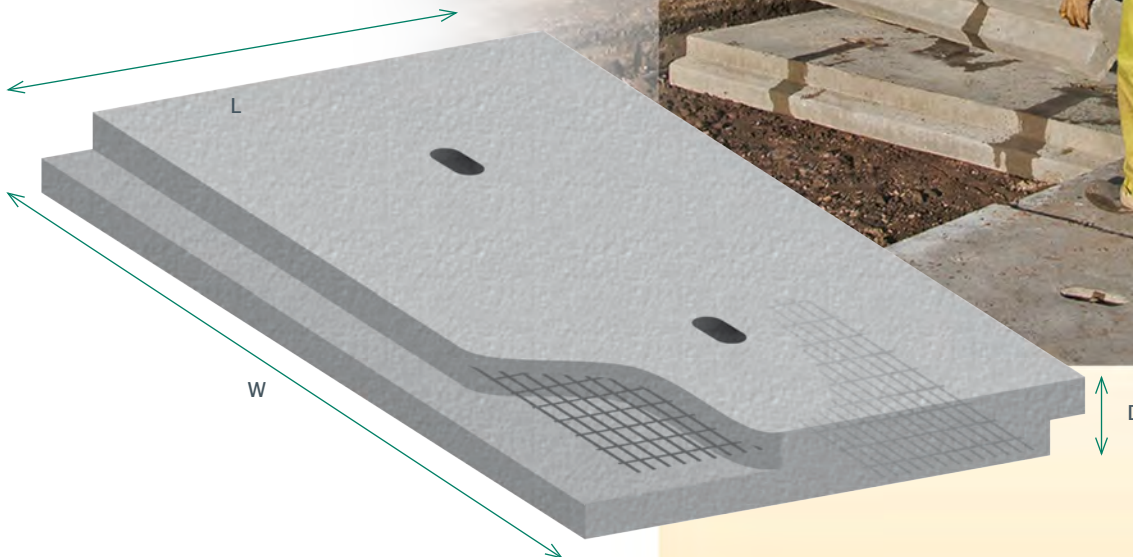

Three standard sizes are available that are all reinforced with heavy duty mesh to give you more choice.

Used to protect high pressure gas mains and high voltage cables, particularly for areas vulnerable to rogue excavations.

Utility and Pipe Protection Slab

Width	Length	Depth	Weight
2500mm	1000mm	150mm	900kg
3000mm	1000mm	150mm	1090kg
3500mm	1000mm	150mm	1270kg
